Yeo Valley
Blagdon, England
Food waste inventory - 1st January 2018 - 31st December 2018
Publication date: September 2019
About Yeo Valley

Yeo Valley is a family-owned farm in the Somerset countryside. We’ve been farming here since 1961 and we make great tasting dairy products with milk sourced from our award-winning organic British Friesian cows as well as from other local dairy farms.

Yeo Valley is a family-owned farming and dairy processing business. From the dairy farm in Blagdon near Bristol, its founders, Roger and Mary Mead, started to make yogurt in 1974 and today Yeo Valley is the leading supplier of own brand yogurts in the UK. The first organic yogurt was produced in 1994 and today Yeo Valley Organic has become the best-known organic brand in Britain.

Operating from six sites in Somerset and Devon, Yeo Valley produces both organic and non-organic yogurts at its Blagdon and Cannington dairies. The Newton Abbot dairy in Devon produces ice cream, sorbets, frozen yogurt and chilled dairy desserts. Yeo Valley’s Crewkerne dairy processes milk, cream and fruit conserves, whilst its Supply Chain operations at Isleport and Axbridge manage the logistical challenge of servicing the needs of the dairies and Yeo Valley’s customers. The head office is based in Blagdon. All of our sites are ISO 14001 certified (the international standard for environmental management).

In 2017 we made a commitment to reduce food waste in our own operations by 50% by 2030.
What we are doing to tackle food waste

Yeo Valley is continually striving to reduce the environmental impact of our operations. Our strategy is to produce as little waste as possible in the first place and recycle the vast majority of the waste we do actually produce.

We are continuing to work with external consultants to map our processing facilities on our production sites to produce loss maps that will enable more focused and effective waste reduction activities. For example, we found inconsistencies in our production process which affected repeatability and have introduced improvements to our metering systems in order to help decrease variability and waste.

At our Blagdon site we use a compactor to squeeze out surplus product that has already been packaged for sending to animal feed. We’re able to recover 90% of the product this way and it’s a great source of protein for pigs.

In a unique collaboration with Tesco and the food re-distribution charity FareShare, we use our brand to periodically produce a ‘Left-Yeover’ limited edition yogurt made with leftover organic fruit that would otherwise go to waste. As an added bonus 10p from every pot sold goes to FareShare.
Food waste data commentary

- We measured our food waste for the 2018 calendar year across all Yeo Valley sites (which are all in the UK).

- Our total food production for this period was 187,639 tonnes. Our overall food waste was 2069 tonnes; which equates to 1.1%. This matches our performance in calendar year 2017 so, whilst we haven’t yet managed to reduce this number, we are confident we are well positioned to improve going forward.

- The majority of our food waste is incurred in our production process. Despite our best efforts, at the end of a production run there may still be some product left in pipes and vessels. And sometimes the product might not quite meet a high enough standard to sell.

- We also produce food waste as a result of washing pipework and vessels to ensure high levels of hygiene in our processes. The wash waters are either treated in our on-site effluent treatment plants or tankered away for use on land for agricultural benefit.

- Before we send packaged waste to energy from waste plant (to generate electricity) we squeeze out as much product as possible through a high efficiency separator and send the liquid to animal feed.
IGD and WRAP have led an industry-wide programme of work developing the Food Waste Reduction Roadmap, showing how the UK food industry will help achieve the UK’s Courtauld 2025 targets, and the UN’s Sustainable Development Goal 12.3 to halve food waste by 2030.
